CARE INSTRUCTIONS

- **Clean spills promptly** using a dry, soft microfiber cloth to prevent staining or water damage.
- **Dust regularly** with a soft microfiber, damp cloth, then dry immediately to remove any moisture.
- **Use protective accessories** such as coasters, placemats, and trivets to guard against heat, moisture, and scratches.
- **Avoid harsh cleaners**, including furniture polish, ammonia-based products, bleach, or chemical solutions, as they may damage the finish.
- **Do not use wood oils or waxes**, as they can alter the natural appearance and texture of the wood.
- **Limit direct sun exposure** to prevent discoloration or finish changes. Position pieces away from windows when possible.
- **Be mindful of temperature and humidity**, acacia naturally expands and contracts with climate change. Small cracks or splits may appear over time and are a normal part of the wood's aging process.
- **Move with care**: always lift and carry, never drag, to avoid scratches or structural damage.
